## Privacy Policy – Hogia Trackit

This text applies to the privacy of the phones and tablets where the Hogia Trackit application is installed.

### Purpose of the application

Hogia Trackit allows the user to use the phones and the tablet's built-in GPS function to send positions to a Web application with Map View, so that the transport planner can efficiently distribute orders to cars. The transport manager can search for history (90 days back in time) in order to handle customer complaints.

### Location features in the app

The app uses the device location to select vehicle and company who will be allowed to see the positions that Trackit sends with the phone's built-in GPS function. By starting and stopping the positioning in the Trackit app, the user can choose whether to send positions.

The user is asked the first time trying to use device if the user wants to use location functionality. If he answers yes, he does not get any more questions about it. If he chooses to answer no, the question will be reset.

### Data and logging

The login and access to information is individual. The mailaddress used to login is sent to the server in order to monitor incorrect or unauthorized access. The user information (mailaddress) is only used in the serverlog and is not displayed to users in the web interface. The mail addresses and positions are transferred to the server.

Location information is stored on the server for 90 days. Data is securely transferred from Hogia's services. The user's identity is credited via login and only invited users have permission to log in.

### Third Party

Hogia does not sell or transfer data from the application to third parties unless otherwise agreed.

### The Application is developed by

Hogia Logistics Systems Center AB
